Marcia (EPA) is also looking for distribution info for Puget Sound/Coastal area, which is not on the website. As I remember, George made this info available for a forest service consultation but changed the names so that it was not proposed critical habitat.

George has confirmed that my memory was correct (in this instance), you can download the GIS data from the website.

It's best to have folks contact me for information requests. We can certainly share the critical habitat proposal and associated GIS layers; in fact, I think they can be downloaded directly from our website (right

George?)

You should talk with George Mayfield (George_Mayfield@fws.gov) and/or John Young (John_Young@fws.gov) about getting data for the Columbia basin.

I am not certain if that data is distributable yet, but I believe the RO will have the most updated versions for the whole DPS.

thanks

Elizabeth Materna said that they had GIS folks provide overlays of the

different bull trout distribution layers, including the proposed critical habitat. I think we may need to do that also.

tribal consultation on

Thanks for being on the call today. This is so big I think I need to draw a road map of sorts so we can all follow along! I had an email from Susan Braley at Ecology, and apparently their package has not been mailed to us yet.

What I captured from today is:

Duane will check with John Young about chapters of the draft bull trout recovery plan as well as whether there are Biological Opinions on TDG for the Columbia/Snake or other Biological Opinions for that system on other parameters. He may also contact Judy Delaverne (sp?) for information from radiotelemetry on the distribution of bull trout in that system.

Shelley will send me chapters from the not-yet draft recovery plan for w. of the Cascades that speak to status of the stock and distribution

The Boise FWS office is our other link for BiOps

Carolyn will get back to me on the plant species and concerns

I'll find the FWS letters on the draft and final T guidance to check on the caveats in there re protection of migration with 16

We need to get Ecology maps and sit down with FWS maps to see where there may be issues on distribution of char -- I have a CD with the maps in Adobe Acrobat that I got from Andrew Kolosseus. I'll get a copy printed for you and mail them.

Cindy will review the draft Cu/CN BA and I'll send her the NMFS comments on the document

I'll get you the invitation to the tribal consultation meeting on August 5 that you can pass on to Jim Michaels and Jim Muck

We'll resume discussion on other topics after next week
